

GREENBROOK LAUNCHES KINGSHIELD CHANNEL TIMERS

GreenBrook has added to the company's **Kingshield** range of electrical accessories with a choice of two- and four-channel central heating and hot water timers.

The first new products to be launched under the **Kingshield** name since GreenBrook streamlined its branding strategy to put all its products within either the PowerBreaker, **Kingshield** or Norslo brand, the new channel timers offer functionality along with a slim, elegant aesthetic look.

Designed to provide the equivalent of up to two or four separate seven day timers in a single, compact unit, the timers both offer up to three programmed operating periods per day for every day of the week. Both the two-channel and the four-channel unit also offer a one-hour boost facility for each channel along with an advance function and a summertime setting. Simple to operate, the units feature a clear, backlit LED display for ease of use and have a seven-day battery back up.

Comments sales director at GreenBrook, John Bowen: "The increasing awareness of global warming and rising energy prices mean that the domestic market is looking for functional, user-friendly devices to help reduce energy consumption in the home. Our new channel timers make it much simpler for householders to use heating and hot water systems on an as needed basis with an accurate, reliable and simple to use unit."

Both of the new **Kingshield** channel timer products conform to IEC 60730-2-7 and IEC 60730-1 standards and are individually clammed for ease of display.
